Introduction	2
Diagrams (mermaid shortcode)	2
Internal Links (Zola link replacement)	3
Redaction (redact shortcode)	3
Version History	4

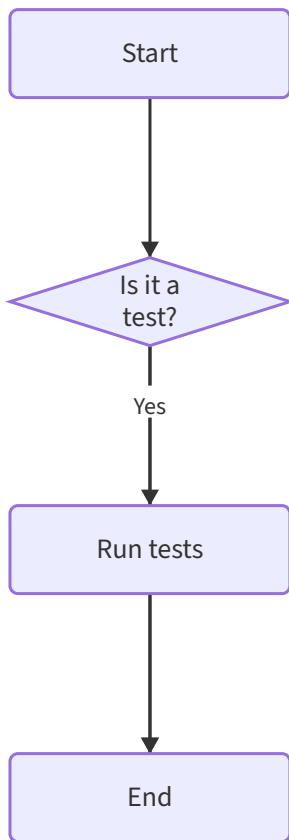

This is not a governing policy. This document is a feature showcase for PolicyPress. It demonstrates custom shortcodes, callouts, diagrams, redaction blocks, and compliance mapping available when authoring policies in Markdown.

Introduction

PolicyPress uses PolicyPress to manage its security policies. The `{{/* org() */}}` shortcode injects the organization name configured in `config.toml`, keeping policies portable across deployments.

Diagrams (mermaid shortcode)

The `mermaid()` shortcode renders flowcharts and sequence diagrams inline on the web page and in PDF output.

Internal Links (Zola link replacement)

PolicyPress uses Zola's @/ link syntax to create portable internal links that work both on the site and in PDF output.

[All Policies](#)

Redaction (redact shortcode)

The `redact()` shortcode wraps content that should not appear in published web output. On the site, a redaction bar is rendered. In PDF output, the `--redact` flag controls whether the content is included.
